

CAPRI Version 4.05

Resolved Issues and Changes

This document describes changes, enhancements, and bug fixes which are included in the CAPRI version 4.05 update.

DESCRIPTION
Hours of Service Worksheet – Reports – A <u>NEW</u> report has been added to list the violations marked as “Documented” within the worksheet. This report operates exactly the same way as the Examples Report.
Hours of Service Worksheet – Reports – A <u>NEW</u> report has been added to print the selected period with associated violations. This was a feature in the DOS version.
Hours of Service Worksheet –Reports – 60/70 hour report was printing “after 00” instead of 60 or 70 under Hours Driving. <i>Resolution</i> – Correctly prints 60 or 70.
Hours of Service Worksheet False worksheet – Reports – If user visits Hours False worksheet before visiting the hours worksheet, additional records are improperly created for that driver. These show up in the Hours Summary Report. <i>Resolution</i> - Fixed.
Hours of Service Worksheet – Entering “119.25” hours on-duty for a given day produced a Stack Overflow error. <i>Resolution</i> – Fixed on 4/9/99 so it doesn’t overflow.
Hours of Service Worksheet – Hours page: When returning to the hours on-duty grid after entering a violation, the list in the grid moves so that the date that is selected is not the date that was originally under the cursor. <i>Resolution</i> – Cursor now returns to the same date.
Hours of Service Worksheet – A new method has been implemented for entering the number of days checked. The name of the Summary page has been changed to "Number Checked". User may now select from three options to define the overall default for days checked. The three options are zero, the number of days in the period, or the days entered as on-duty. The new "Number Checked" page also allows the user to select these defaults on a violation-by-violation basis. As always, the user can change the number of days checked manually.
Hours of Service Worksheet – References to “Missing Logs” (ML) have been changed to “No Record of Duty Status” (No Rods / NR) on all screens and reports. On the Hours page, the date, day of the week, Julian date have been changed from red to dark blue. This preserves red for use in connection with violations. Also on the Hours page, if the date is beyond three months from today, a message is displayed on the DVIR panel reminding the user that the DVIR is not required to be on file. The same message is displayed for records of duty status if the date is beyond 6 months.

DESCRIPTION
Hours of Service Worksheet – A message was put in place to remind users if the number discovered for a violation type exceeds the number checked. Also, a warning message is displayed if all of the number checked fields equal zero.
Hours of Service Worksheet – The Daily Summary page, previously located behind the Hours detail page, has been moved up to the main tabs across the top and renamed “Violation List”. Additional columns have been added to this list for Form and Manner (F&M) and whether the date was marked as Federal or State.
Hours of Service Worksheet - Putting 0 in a 10- 15- or 70-hour violation was not always removing the violation from the review. <i>Resolution</i> – Fixed.
Hours of Service Worksheet – False page and the Hours of Service False Worksheet have been modified to shorten the edit box for Time and a note was added to instruct users to use Military Time.
Hours of Service Worksheet – False worksheet – The Sort selection option incorrectly labeled the Driver <u>Number</u> option as Driver <u>Name</u> . <i>Resolution</i> – The sort option was renamed it Driver Number and the Driver Number is now displayed in the grid.
Hours of Service Worksheet – False page and the Hours of Service False Worksheet – A request was made to include additional document types. <i>Resolution</i> – Additional document types added.
Drug & Alcohol Worksheet – Occasional reports of problems relating to driver list, including: Crash date & time and Collection date & time for wrong driver; Driver names blank after using DQ worksheet; and Driver name from wrong review. <i>Resolution</i> - Fixed.
Drug & Alcohol Worksheet – Drug and Alcohol Detail Report – Fields for the "number of tests required" and the "number of tests done" were reversed. <i>Resolution</i> – Fixed.
Driver Qualification Worksheet Report – All reports – Violation descriptions were occasionally missing. <i>Resolution</i> - Reports now include all descriptions.
Recommendations – An option was needed to allow users to control the print order of the recommendations. <i>Resolution</i> – <u>NEW</u> – When entering recommendations, the user may now specify the print order by entering a number in the "Order" column on the Selected page. This print order field defaults to blank and if not modified, the recommendations will print in the order selected.
Reports – All reports were reviewed to ensure they contain a signature line, date printed, and version # on each page.
Reports – All reports were upgraded internally to reflect the latest strategies suggested by Borland for Delphi. This should improve stability and data integrity.

DESCRIPTION
<p>Reports – A new complete CTFR Part A Report was added. A modified two page Part A report was also added for a combined CR/CTFR. Additional changes will be made to the CTFR reports in future releases.</p>
<p>Central Driver List – If user accessed the Central Driver list from within a worksheet, a problem occurred if all drivers were deleted. <i>Resolution</i> – Drivers can only be deleted when accessing the Central Driver List from the main menu. A message was added to instruct users how to delete driver.</p>
<p>Part A – Entering the maximum number of drivers for all four driver types can create an overflow error for the total driver calculation. <i>Resolution</i> – Fixed on 04/09. This was <u>not</u> reported by a user.</p>
<p>Part A – HM shipper data not removed when shipper operation deselected. <i>Resolution</i> - Shipper data is now removed when appropriate.</p>
<p>Part A - List Missing Data option generated an error message when:</p> <ol style="list-style-type: none"> 1. the mailing address was the same as the physical address; <u>and</u> 2. something was missing; <u>and</u> 3. the mailing address components were disabled. <p><i>Resolution</i> – Fixed List Missing Data option to enable any disabled component as needed.</p>
<p>Part A - Some Reviews reached MCMIS with a non-numeric value in the County Code field. <i>Resolution</i> – Added edit check to ensure the County Code field accepts only numeric values. Requested by MCMIS.</p>
<p>Part A - Occasionally the letter “O” was entered instead of a zero in the SI Code field. <i>Resolution</i> – Added edit check to ensure the SI Code is entered in the proper format. Requested by MCMIS.</p>
<p>Part A - A few reviews have been uploaded with zero CDL drivers. <i>Resolution</i> – Added a warning if the number of CDL Drivers equals zero. Requested by MCMIS.</p>
<p>Part A - A few reviews have been uploaded to MCMIS with data in the zip code, territory and tax ID number fields entered incorrectly. <i>Resolution</i> – Additional edit checks have been added to ensure the proper length and format for these fields. Requested by MCMIS.</p>
<p>Part A - If user enters a complete address, then returns and changes the State, the zip code is incorrect unless changed as well. <i>Resolution</i> – If the State field is changed in the address, the zip code field is blanked. This was implemented in Part A and all other screens which include an address.</p>
<p>Part A Report - The signature block for the person receiving the report was moved to follow the SI signature. This allows a multi-page Part A to have a signature of the recipient on each page and makes Part A uniform with the other reports in this respect.</p>

DESCRIPTION
Intrastate – Intrastate Carrier with interstate shipping operation was rated. <i>Resolution</i> – This carrier now only receives an intrastate rating if the “generate intrastate rating” option is turned on.
CDLIS - The default CDLIS transaction type has been changed from STATUS to HISTORY.
Export – The display grids were expanded. Also, attempting to export to directory \capri\tempto was causing error. <i>Resolution</i> – That directory is no longer accepted as a valid path.
Import - The option to overwrite an existing review was removed.
Inactivation Request - The Note List menu option is now disabled for an inactivation request.
Other - Clicking on the currently active tab marker “<< >>” makes it disappear. <i>Resolution</i> – The <<>> marker no longer disappears.
Other - If a new review is started from scratch and the user attempts to move to a Part other than Part A without first entering a subject name, the software incorrectly changes to a different subject. <i>Resolution</i> – Name field is now required before moving to a different Part of the review. The Subject is now correctly maintained in all instances.
Other - Spell checking was not working well on short edit boxes. <i>Resolution</i> – Spell checking has been limited to memos such as remarks, recommendations, violation description and example and notes.
Reindexing Utility - The reindex utility was modified to include customized violation tables.
Online Help – Updated to include new features.
